

EUROPEAN PRICE REPORT

Issue 12/2017 December 2017

LATEST TRENDS

Demand is strong during this Christmas period, typically a time of high seafood consumption. Two categories of product are proving most popular, one being traditional products such as carp and cured cod and the other being luxury products such as lobster, oyster and crab. Prices for some species are severely elevated but this will change in most cases after Christmas and the year-end rush. However, for certain seafood items such as cephalopods, extremely tight supply means there is no end in sight for the upward trend.

GROUND FISH

Christmas, in addition to the Lenten period, is one of the main consumption periods for cured cod, which includes both wet-salted cod and stockfish, particularly in the Southern part of the continent.

Index for prices

Groundfish	8
Flatfish	9
Tuna	10
Small Pelagics	11
Cephalopods	12
Crustaceans	15
Bivalves	18
Salmon	19
Trout	20
Freshwater fish	20
Non Traditional Species	21
Seabass-Seabream-Meagre	22

The **European Fish Price Report**, based on information supplied by industry correspondents, aims to provide guidance on broad price trends. Price information is indicative and should be used only for forecasting medium- and long-term trends. FAO is not responsible for any errors or omissions.

Prices for wet-salted Pacific cod (*Gadus macrocephalus*) fillets from frozen raw material are reported to be at historically high levels with little inventory available on the market, traders expecting TAC reductions, and strong demand for raw material from the USA and China. Expectations for January and February are for further increases in Pacific cod prices.

For wet-salted Atlantic cod fillets (*Gadus morhua*) from fresh raw material of Faroese and Icelandic origin, very little stock is available at present and the fisheries are coming to a close due to increasingly wintry conditions. In the Faroe Islands, in particular, available supply is almost zero. Combined with strong demand in Spain, this situation has resulted in sky high prices for cured Atlantic cod.

Increasing prices for Alaska pollock are reported in Vladivostok. In Moscow, demand is good, and although prices are reported to be stable for the time being, they are likely to rise soon. In Poland, cod landings were good during November and early December, leading to a decline from the high price levels reached earlier this year.

TUNA - BILLFISHES

Tuna prices have started to fall sharply, particularly skipjack on the Bangkok market, which is the trend setter for the whole canning sector. Fishing in the Western and Central Pacific is reported to be moderate-to-good in most areas with exception of the fishing grounds near Kiribati which are experiencing bad weather. Raw material inventories at Thai canneries remain at a healthy level as the skipjack price continues to decrease sharply.

On 9 November 2017, the 2nd period of the tuna fishing ban began in the Central Eastern Pacific. This ban will last 72 days, ending on 19 January 2018, until which time 65 percent of the Ecuadorian tuna fleet will remain in port. Despite this halt in fishing activity, prices of raw skipjack have declined by 17 percent from the beginning of November, to around USD 2 100 per tonne. This unexpected decline was caused by the relatively low skipjack price in Bangkok, itself the result of weak demand for canned tuna in Europe and America. Importers in these areas are adopting a wait and see strategy, in anticipation of prices of finished material dropping even further.

Fishing effort has decreased in the Indian Ocean due to the closure of the yellowfin fishery to the Spanish fleet. Raw material inventories at local canneries remain healthy but transshipment activities have reduced. Skipjack and yellowfin prices have fallen in line with the broader market situation.

Catch rates in the Atlantic Ocean are reported to have slowed down while raw material inventories at local canneries remain at a moderate level. Following the global trend, both skipjack and yellowfin prices have decreased. The annual 2-month FAD closure for the Atlantic will come into effect from 1 January 2018.

European prices for both skipjack and yellowfin have fallen while market prices for cooked, double cleaned yellowfin loins remain stable. However, market activity is slow due to the upcoming year-end holidays and the impending arrival of duty-free quota loins.

SMALL PELAGICS

Herring catches in the Baltic are still good, but will come to a halt once the water begins to ice. In Poland, herring prices fell while sprat prices rose due to low supply. However, the latter product is still one of the fish species with the lowest price points, selling at USD 0.18 per kg.

Pacific herring is in ample supply and is selling at record low price levels in Vladivostok. On the Moscow market, however, the fish is marketed at the same price as one month ago.

CEPHALOPODS

After the seasonal catch ban, squid catches in South Africa were reported to be good, with mostly large sizes being landed. Offer prices on the European market have come down somewhat from the record level reached in November, due to good supply from South Africa.

Cuttlefish, meanwhile, is reported to be in low demand which is leading to declining prices.

Octopus prices remain very high, with small octopuses selling at a level exceeding EUR 10.00 per kg and large octopuses easily reaching EUR 11.00. Most of the octopus supply is coming from Morocco and Mauritania, supplemented by some limited arrivals from Indonesia. During December, however, landings in Indonesia declined, and prices of octopus are now rising daily.

SQUID - in Italy, origin: South Africa

CRUSTACEANS

Surprisingly, demand for shrimp, generally an important component of Christmas dishes, is reported to be relatively weak on the European market. As a result, prices are stable or even declining, especially for the smaller sizes.

In Argentina there are no stocks of frozen on board shrimp available, and the demand for the on land production is beginning to push prices upward. In Europe, the Christmas campaign is at its height with good sales, stable prices and supply problems as yet undetected. The only exceptions are the large shrimp, such as 10/20, for which an upward trend is reported. Earlier in 2017, the price differential between large and small shrimp had been decreasing but this trend has now reversed.

ARGENTINA RED SHRIMP - origin:

Norway lobster is in good demand leading up to the Christmas festivities, with prices for large specimens increasing on the Spanish and Italian market.

European lobster is in very strong demand and, with little local fishing activity at present, prices have soared and are now exceeding EUR 32.00 per kg. Similarly, crab prices are also increasing by the hour, approaching EUR 3 per kg.

EUROPEAN LOBSTER - in Europe, origin:

BIVALVES

Mussel sales in France are stable, as the winter months are not a typical consumption period. All products forms are well represented, with Spanish mussels selling in the lower price bracket and the French bouchot mussel positioned in the upper price category, selling at around EUR 5.00 per kg.

The oyster season is expected to pick up again as we enter the festive period. According to the mortality monitoring bulletin from the French scientific institution IFREMER, dated 09/11/2017, the average cumulative mortality rate is 65.4 percent at the national level for seed oysters with high regional variation. Juvenile and adult oysters are reported as having much lower mortality rates (7 percent and 6.9 percent respectively).

Overall, according to the IFREMER monitoring programme up to early-November, seed mortalities are similar to 2016 levels whereas juvenile and adult mortality rates are below last year's levels. Summer oyster growth is reported to have been disappointing and a shortage of large oysters is expected for the end of year season. Oysters in France typically sell at EUR 4.60 per kg (No 3 size), but are selling retail at EUR 17.60 for the dozen. Some special oysters during this period can sell at EUR 2.80 per piece.

MUSSEL BOUCHOT - in France

SALMON

As we approach the festive period, it is becomingly increasingly clear that the salmon farming sector will fall some way short of achieving the spectacular profits seen at the end of 2016 as salmon prices soared. Indeed, aggregate prices for farmed Atlantic salmon as reflected by the Fish Pool Index in week 49 of 2017 were 36 percent below the same week in 2016 at NOK 50.95 per kg, and only slightly up from a few weeks ago when prices reached their lowest level in 2 years. The primary cause of the decline is the significantly higher harvest

volumes coming out of Norway in the latter half of the year, which has resulted in an excess supply of unsold fish, depressing prices for farmed Atlantics across the continent. This drop was widely expected by the industry, but the sustained effect was perhaps somewhat less anticipated. Reports suggest that excellent biological performance at Norwegian farms, meaning good growth rates and reduced disease mortalities, has provided a further boost to supply volumes and resulted in 10 percent higher biomasses compared with the same period last year. The impact of the situation is clearly evident in Norway's salmon export figures for November in the most recent report of the Norwegian Council (NSC), with total exported value for the month down 5 percent compared with November 2016, even as total volume increased 11 percent to 103 000 tonnes.

The divergence between the expected impact of the volume spike and the reality has been reflected in forward price trends for December 2017 and early 2018, which have been revised downward over the last few weeks to NOK 52.40 per kg for December and NOK 55 per kg for the first quarter of 2018. Although underlying demand growth is still strong, the lower price level will take time to pass onto consumers and the current supply surplus combined with the 5 – 7 percent increase in Norwegian production anticipated for next year will slow upward price movement for some time to come.

TROUT

The conditions that boosted biological performance of farmed salmon has had the same effect on farmed Norwegian trout, pushing biomasses above the equivalent period last year. In the case of trout, however, supply has steeply declined in the last 2 years and the current biomass level is still well below that observed in 2015. As a consequence, prices remain high despite the 36 percent increase in exported volume for November reported by the NSC. Belarus and Japan remain the top destinations for exported Norwegian trout. Meanwhile, in Italy, trout prices are stable. Trout is generally not a very prominent product for Christmas sales.

FRESHWATER FISH

This is the main sales period for carp in Hungary and in Germany. Demand is very strong, but prices are reported to be stable or even declining slightly.

Nile perch supplies seem to have recovered after very limited arrivals during the third quarter of the year. Sales prices at retail outlets have dropped to EUR 9.99 per kg, down from EUR 17.99 per kg in October.

SEABASS - SEABREAM - MEAGRE

Turkey and Greece, the two largest suppliers to the European bass and bream market, both increased their harvest and export volumes substantially this year. This increase has been relatively more pronounced for bream, pushing prices down on the major Italian market to 4-year lows for the 300-450g size. Bass prices for the equivalent size are at comparable levels to the last few years once seasonal trends are taken into account. However, reports from wholesale markets in Spain suggest that on that market there has been slight decline for farmed bass, again on a seasonally-adjusted basis. Christmas is typically the low point for bass and bream prices, which are more of a summer seafood item, but the usual uptrend in early 2018 will have to contend with further supply increases from Turkey, which stocked large quantities of juveniles last year. In Greece, meanwhile, the expected consolidation of leading Greek aquaculture companies Selonda and Nireus, following the currently ongoing sales process, is anticipated to be a positive development for the industry as a whole, set to boost investment and innovation in marketing and production and provide renewed strategic direction for the Greek sector.
