EUROPEAN PRICE REPORT

December 2024
12/2024

Latest trends

With the holiday season approaching, sales are becoming brisk and demand is far better than last year, when considerations of inflation and high prices had overshadowed the seafood market. Prices of all seafood are going up, with the exception of some small pelagic species in the Mediterranean area, which are in good supply. Low demand is reported for tuna products, as canneries close down for the year-end festivities. Tuna raw material prices have seen a general decline with the exception of the Bangkok market.

In this issue of the European Fish Price Report, increases have been reported for 21 percent of the prices, while 15 percent exhibit a downward trend. Others have stayed stable at the November price level. Despite the low inflation at present (two percent per year), festivity seafood platters in European markets are expected to be about six percent higher than last year for the Christmas Eve dinner and even higher (up to nine percent) for the Saint Sylvester dinner in Italy.

In January 2025, China and other Asian markets will pay high prices for seafood in preparation for the Chinese New Year festivities, in contrast to European traders who will be reluctant to buy new supplies. This rather cautious buying behaviour in Europe will remain until the Holy Week approaches, which in 2025, will be rather late, from 14–19 April; this means that seafood trade will be slow in Europe for a longer period than usual.

The European Fish Price Report, based on information supplied by industry correspondents, aims to provide guidance on broad price trends. Price information is indicative and should be used only for forecasting medium- and long-term trends. FAO is not responsible for any errors or omissions.

GROUND FISH

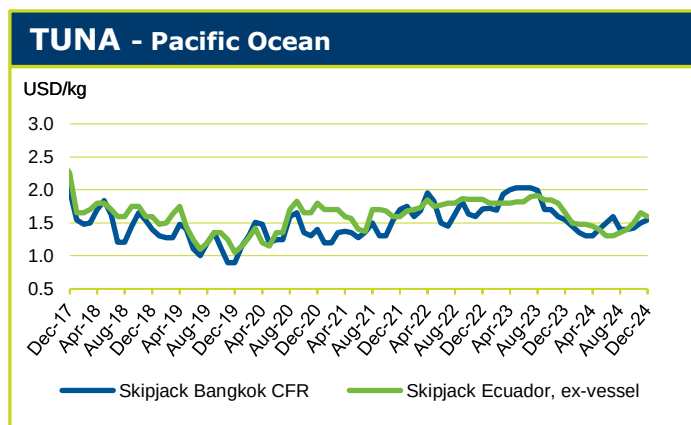

Cod is in low supply at the moment, and prices are going up. A good indicator of this trend is the fact that Norwegian export prices of cod products went up in just one month by five percent on average, more for fillet products and less for whole cod. Next month, however, prices are expected to drop as the catching season starts in the Lofoten Islands.

The consumption of klipfish products (wet-salted cod fillets from frozen raw material [*Gadus macrocephalus*] and wet-salted cod fillets [*Gadus morhua*] from fresh raw material of Faroese and Icelandic origin) will decrease in January 2025, as is usual in that month every year. However, as low temperatures are expected, the consumption of these products will be better than in January 2024. Prices are very high this month, as the year-end festivities constitute a major consumption period for klipfish in several southern European countries such as Portugal, Spain and Italy.

TUNA - BILLFISHES

Fishing in the Western and Central Pacific has reduced to the moderate-to-poor level. Furthermore, as Vessel Day Scheme (VDS) limits have been reached, some vessels are moving to other areas in search of fish. The skipjack price continues to rise and some carriers are being diverted to other markets due to better pricing elsewhere.

TUNA – BILLFISHES (cont.)

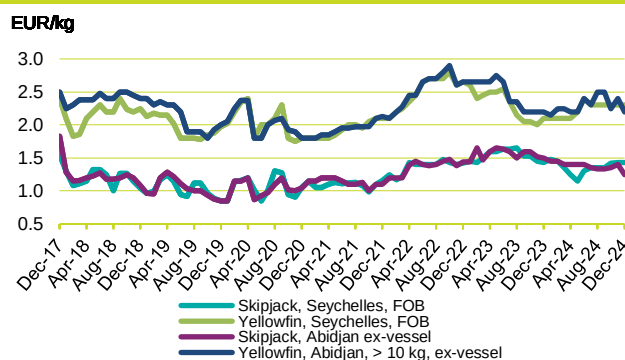

Numerous fishing vessels in the Indian Ocean have suspended catching due to the exhaustion of the yellowfin quota. For those vessels still in operation, fishing is reported to be at the moderate level. However, the demand for raw material is low as local canneries will be closing for the year-end holiday and maintenance period. Both skipjack and yellowfin prices have fallen due to the low demand.

Fishing in the Atlantic Ocean remains at a poor level with many small fish and bycatches. Despite this, skipjack and yellowfin prices have fallen due to lower demand during the year-end holiday period.

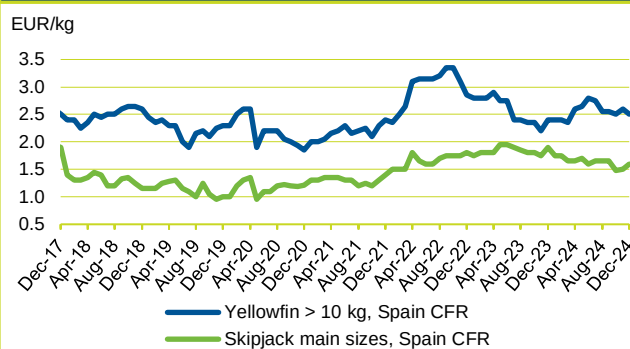

The second 72-day Inter American Tropical Tuna Commission (IATTC) “veda” in the Eastern Pacific Ocean is in force until 19 January 2025, with 57 percent of the fleet opting to tie up during this period. Vessels that are out fishing are reporting slower catches. Carriers from the Western and Central Pacific continue to deliver cargo to supplement the local landings in Manta, Ecuador. The raw material demand has dropped during this year-end period and both skipjack and yellowfin prices are down.

In the European market, the skipjack price continues to increase while yellowfin prices have fallen. Prices for cooked, single-cleaned skipjack loins have also decreased in anticipation of the new duty-free quota for loins which comes into effect on 1 January 2025.

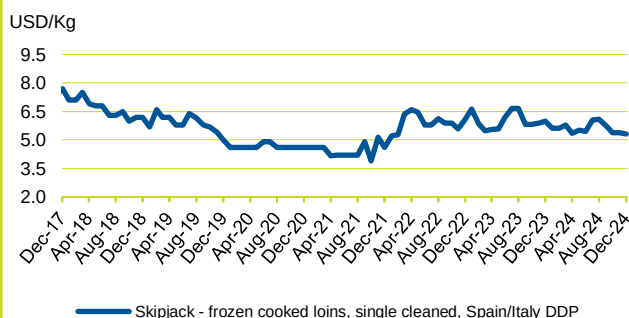

TUNA - Indian/Atlantic Oceans

TUNA - Spanish canneries

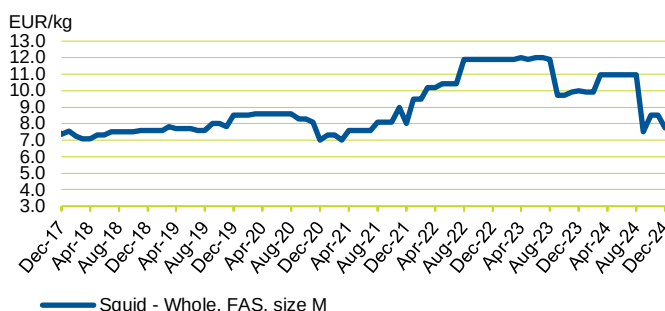

TUNA - Loins

CEPHALOPODS

Squid fishing in South Africa is at the start of the season but catches have remained poor so far. Yet, even with little tonnage on offer, prices remain weak. At this time of the year, it has always been tough getting sales because buyers in Europe prefer to assess matters after the festive season. Nevertheless, there has been a very slight positive move in prices. In fact, in the Italian market, prices moved up by EUR 0.25 per kg.

SQUID - in Italy, origin: South Africa

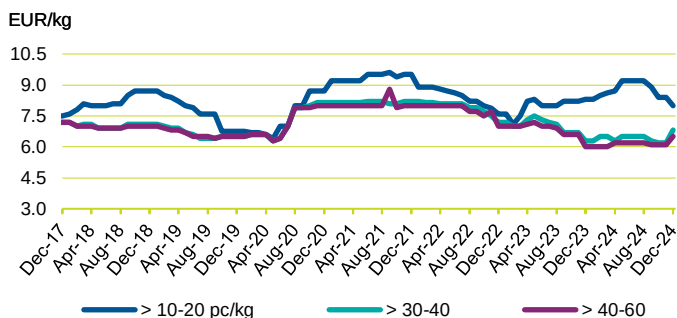

The peak consumption season has begun for octopus. However, in Indonesia it is the rainy season, so catches are determined by the weather. As demand is going up and supply is low, the price level will be stable or higher, depending on the fishing area. The total octopus catch is around 1 000 tonnes per month which is 35 percent less than during the same time last year.

Prices of cuttlefish are going down in view of the ample supply in the market. In the Italian market, fresh cuttlefish is selling at EUR 1.00 per kg less than last month.

CRUSTACEANS

Due to the strong seasonal demand, shrimp prices are going up. For instance, all sizes of Argentinian shrimp going to the Spanish market went up by EUR 0.30 per kg, with the exception of very large shrimp (10-20 pc/kg) which experienced a tiny decline of EUR -0.10 per kg.

ARGENTINA RED SHRIMP - origin: Argentina

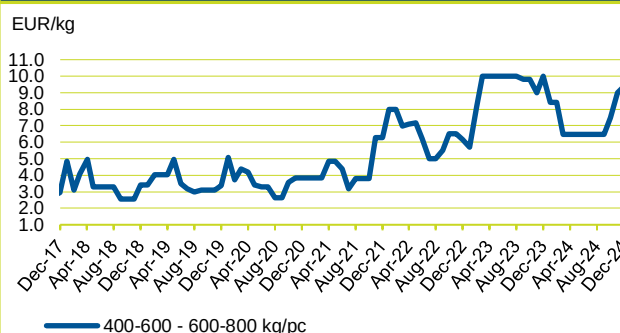

CRUSTACEANS (cont.)

Approaching the end of the year, shrimp material supply from Indonesia is going to decrease, as some factories prepare for long holidays. Prices are good at this time of the year, covering more than the cost of farming. Additionally, some farmers will continue growing their shrimp, but with the controlled harvesting in general, prices will maintain an overall balance.

Demand for lobster is very strong in most markets due to the holiday season. In Italy, Norwegian lobster prices increased by EUR 0.50-0.60 per kg in just one month while rock lobster from Yemen went up by USD 3.00 per kg in the same time frame. In the Paris wholesale market, lobster prices increased in December by some EUR 20.00 per kg, showing that lobster is a main festivity item. Likewise crab is in strong demand in the European market, leading to higher price levels.

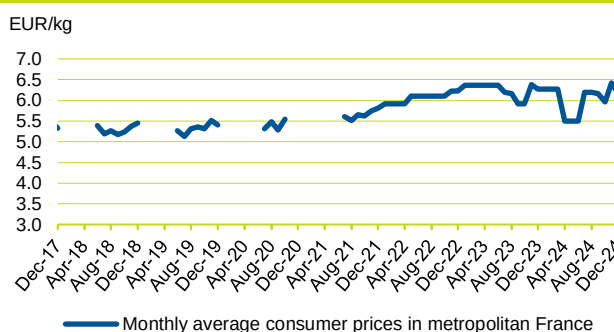

CRAB - in France, origin: Europe

BIVALVES

Clams are a popular seafood for festivity dinners. Due to the invasive blue crab which eats up young bivalves, the price of clams in Italy this Christmas season has reportedly gone up by 32 percent for both the cultured and wild stocks. In fact, the output of cultured clams is expected to be only 10 percent of the normal production this year, which has led to sky-high prices of EUR 50.00 per kg during the holiday season, as compared to EUR 20.00 per kg last year. Consequently, clams are pricing themselves out of the market. One important point is that the blue crab has now also reached the Tyrrhenian Sea, after spreading all over the Adriatic area last year. Thus, both sides of the Italian peninsula are impacted by the blue crab.

MUSSEL BOUCHOT - in France

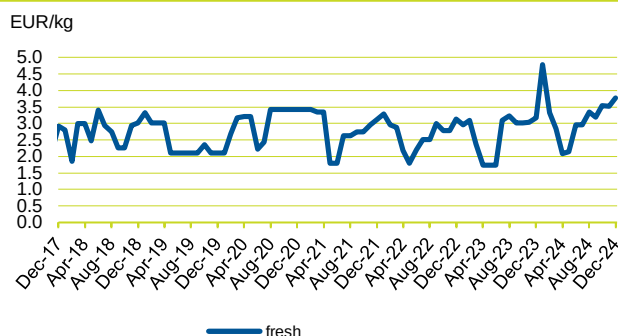

SMALL PELAGICS

In view of the reduced supply, mackerel prices are going up in the European market. Some 10 percent increase was experienced in the Italian market between November and December 2024. Export prices from Norway also increased by seven percent during the same time span.

On the other hand, sardine and anchovy prices are experiencing a downward trend, with the declines for these species hovering at EUR 1.00 per kg. Arrivals are good at the moment, as the weather conditions in the Mediterranean, especially in the Adriatic Sea, are better than usual at this time of the year.

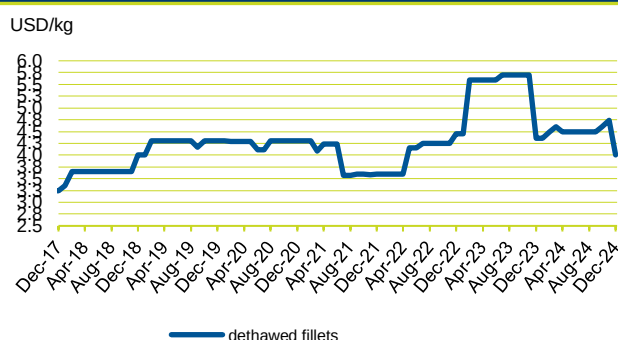

Mackerel - in Italy, origin: France

FRESHWATER

In 2023, total imports of pangasius into the European Union amounted to 70 000 tonnes, 3 000 tonnes less than in 2022. Germany has emerged as the main consumer of pangasius fillets in the European Union, as in this country, price tends to outweigh quality and taste. Spain, which was a major pangasius consumer some 10 years ago, has continuously reduced its imports of this species. In 2023, the country imported 5 500 tonnes, almost 1 000 tonnes less than in the previous year.

Pangasius - in Italy, origin: Viet Nam

FRESHWATER (cont.)

In the first nine months of 2024, imports of pangasius into the European Union were stable at 2023 levels, with some 54 000 tonnes imported during this period. German imports of pangasius increased by two percent during the period to 9 200 tonnes while Spanish imports increased by 40 percent compared to the corresponding 2023 figure to about 5 500 tonnes during January to September 2024.

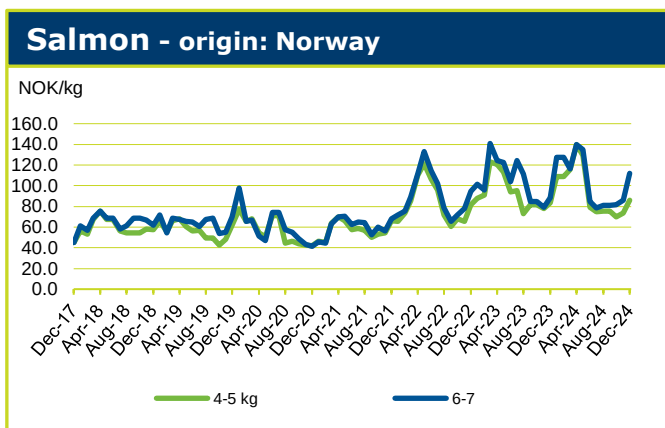

SALMON

According to the Norwegian Seafood Council (NSC), November 2024 marked the first time that the export value of salmon exceeded NOK 12 billion, consolidating its position as Norwegian seafood's most important export product. It was also the highest-ever export value for salmon in a single month, generating NOK 12.1 billion (more than EUR 1 billion) due to the 131 232 tonnes exported.

These figures signified increases of five percent and three percent, respectively, compared with the same month last year. In addition, the November 2024 figures were NOK 224 million (EUR 19.26 million) higher than the previous record month, which was in October 2023.

Poland, France and Netherlands (Kingdom of the) were the largest markets for salmon in November 2024. The NSC also highlighted the strong growth in exports to China due to continuing good demand from that market. The Chinese bought Norwegian salmon for NOK 490 million (EUR 42.14 million) in November 2024.

Norway is the largest supplier of fresh whole salmon to China and has a market share of around 45 percent. The institution noted that China had sharply increased its imports last year after the COVID-19 pandemic, and that the market was particularly strong at the beginning of 2023. This year, the import volume of Norwegian salmon into China has continued to increase, with the demand this past autumn being significantly stronger than at the same time last year.

SALMON (cont.)

NSC data disseminated by Undercurrent News Price Portal recorded that fresh Atlantic salmon FOB prices regarding sales to export markets at the Norwegian border reached NOK 86.95 (EUR 7.48) at week 47, up 4.13 percent compared to the previous week. Salmon prices have continued an upward trend since week 40 at NOK 69.69 (EUR 5.98). The price growth for salmon was also a key driver in the continued upward trend in total seafood exports over several consecutive months.

In terms of production, salmon companies are experiencing greater biological challenges as sea temperatures rise and there is some uncertainty about the impact on the industry.

TROUT

According to the NSC, November 2024 was a good month for Norwegian trout, after 6 595 tonnes were exported worth NOK 592 million (EUR 51 million). This represented a growth of four and six percent in volume and value, respectively, compared with the same month last year.

Lithuania, Ukraine and the United States of America were the largest markets for trout in November 2024. Lithuania, in particular, had the highest value growth, with an increase in export value of NOK 45 million (EUR 3.8 million), or 93 percent, compared with the same month last year. The export volume to Lithuania ended at 1 142 tonnes, up 93 percent in volume over November 2023.

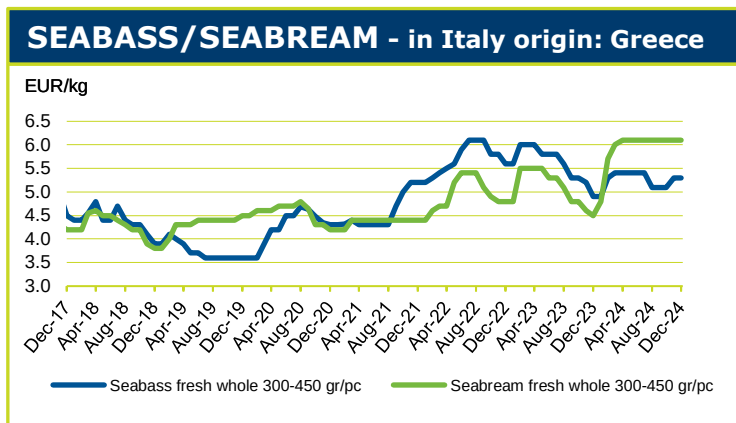

According to NSC data disseminated by Undercurrent News Price Portal, weekly volumes and FOB prices regarding sales to export markets at the Norwegian border showed that HOG fresh Norwegian trout reached NOK 83.90 (EUR 7.22) at week 47 of 2024. This represented a growth of three percent compared to the price registered in the previous week. The upward price trend had started in week 45 at NOK 75.66 (EUR 6.40).

SEABREAM/SEABASS

Seabass and seabream prices are reported as being stable at the Greek producer level. In fact, winter is not a very interesting sales period for these species, and arrivals are relatively low at the moment.

Greece remained a strong supplier of seabass in 2024, increasing its exports. However, its seabream shipments were lower due to domestic supply shortages, a development which is expected to impact the industry, and with recovery unlikely before 2025. This year also, Greece emerged as an important market for seabass, as the country had to import supplies from Türkiye in order to meet the existing export contracts.

Türkiye's seabass exports grew in 2024, but prices were lower than in 2023. The country is now also becoming an important seabream exporter with substantial increase in export values, in addition to the dominant position the country already has in the seabass market. Italy continues to be the main market for both seabass and seabream, followed by Spain.
