Latest trends

The Gulf crisis affects the global fisheries sector primarily through soaring fuel and fertilizer costs, supply chain delays, reduced days at sea, and mounting operational risks for fleets and processors. Even small scale fishers will not escape unscathed as the oil price hikes will lower profitability in the sector. In response, the European Union has explicitly included fisheries among the sectors suffering “unexpected, sudden, and significant cost increases” due to the crisis. Already, the fuel price for the Italian fisheries sector has more than doubled from EUR 0.70 per litre to EUR 1.50 per litre in just the past month between March and April 2026.

On the other hand, aquaculture depends on agricultural inputs – soy, grains, and other feed components – whose production relies heavily on nitrogen fertilizers. Nearly half of the world’s traded urea comes from Gulf exporters transiting the Strait of Hormuz. Disruptions force fertilizer plants to cut output, raising feed ingredient prices and reducing availability. This increases feed costs, which represent up to 70 percent of aquaculture production expenses.

In addition, fisheries and aquaculture trade depends heavily on transport. With many refrigerated vessels remaining stranded, delivery times for imported raw materials have increased, affecting export reliability for seafood products. In the medium term, all these negative impacts will lead to higher inflation rates, rising prices of aquatic products, pressure on aquaculture margins and potential shortages of key inputs.

In this climate of uncertainty, fish traders met in Barcelona recently at the Seafood Expo Global 2026. Amidst some pessimism, there was also the clear recognition that world fisheries is in need of targetted multilateral agreements and a stable global trade climate.

The European Fish Price Report, based on information supplied by industry correspondents, aims to provide guidance on broad price trends. Price information is indicative and should be used only for forecasting medium- and long-term trends. FAO is not responsible for any errors or omissions.

Groundfish

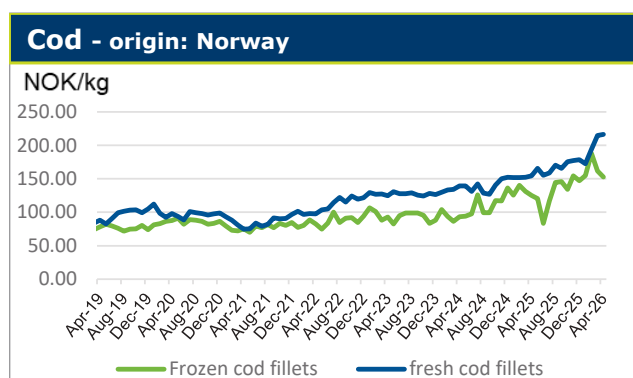

There is very strong global demand for whitefish in all major European markets. Prevailing low stock levels have resulted in huge price increases for Alaska pollock and Pacific hake fillet and minced blocks. The prices for Pacific hake went up by EUR 1.00 per kg within a month, a very unusual development for a species which normally shows stable prices. Also in just one month, prices of frozen cod in the Italian market went up by EUR 1.00 per kg in an upswing that shows little signs of moderating.

Due to warmer temperatures in Southern Europe, consumption of cured groundfish (clipfish and stockfish) product is decreasing as it is very much linked to traditional winter recipes.

At the same time, the price of cod (*Gadus morhua*) has increased significantly as the Norwegian fishing season was not very productive. The resulting decline in the supply of raw material available for cured cod production, as well as competition from the filleting industry, are additional reasons for the decrease in consumption of the product.

Trout

Norwegian trout shipments showed a weaker performance in volume and value during March 2026 as compared to the same month last year. Exports totalled 5 100 tonnes worth NOK 512 million (EUR 44.0 million), equivalent to a 15 percent drop in volume and a 6 percent decline in value year-on-year, based on data from the Norwegian Seafood Council (NSC). The smaller decline in value compared with volume indicates some degree of price resilience during the period.

This more subdued performance comes against a backdrop of generally resilient aquatic exports from Norway, supported by strong demand in Asia and higher prices for several key species. In contrast, trout showed more limited momentum in an environment affected by logistical challenges, higher transport costs and ongoing adjustments in trade flows.

Price developments followed a similarly uneven pattern. According to NSC data disseminated by the Undercurrent News Price Portal, HOG fresh Norwegian trout, FOB at the border, reached NOK 87.74 (EUR 7.55) per kg in Week 12, reflecting a 2.04 percent increase from the previous week. Following a sharp drop in Week 10, prices rebounded strongly in Week 11 and continued to edge higher in Week 12.

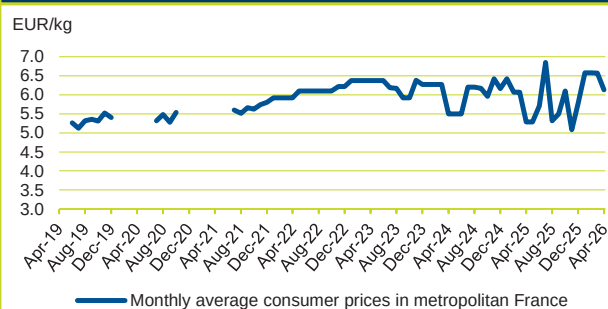

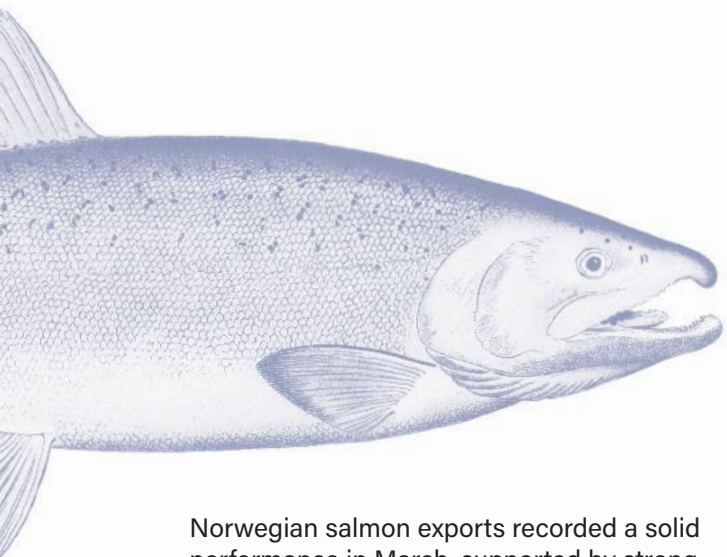

Bivalves

Chile continues to be a major supplier of mussels to the Spanish market, where it mainly ends up in the canning industry. In early 2026, Chilean mussel export prices increased by over 15 percent to USD 4.77 per kg for half-shelf IQF product.

French producers are promoting a new product, namely mini-oysters. About half the size of the normal oysters, this product can open up a new market, mainly among the younger generations, as the cost per unit is far lower than for traditional oysters.

MUSSEL BOUCHOT - in France

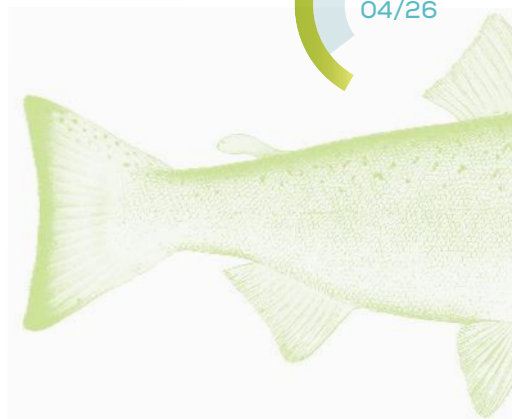

Norwegian salmon exports recorded a solid performance in March, supported by strong demand in Asian markets despite ongoing geopolitical and trade disruptions. Total shipments reached 106 000 tonnes worth NOK 10.5 billion (EUR 903 million), representing a 6 percent increase in value and a 4 percent rise in volume compared with the same month last year, according to the Norwegian Seafood Council (NSC).

Market dynamics during the month were strongly influenced by the conflict in the Near East, which disrupted logistics and trade flows, particularly in the early weeks. Exports of fresh whole salmon in early March declined by 13 percent to Saudi Arabia, 33 percent to the United Arab Emirates and 85 percent to Qatar. NSC analysts note, however, that exports to several of these markets recovered towards the end of March, approaching more normal levels.

At the same time, exports redirected towards other destinations, most notably countries in Asia, showed improvement year-on-year. Exports of fresh whole salmon to China increased by 61 percent in volume, while other markets in the region also recorded strong growth, including

Salmon

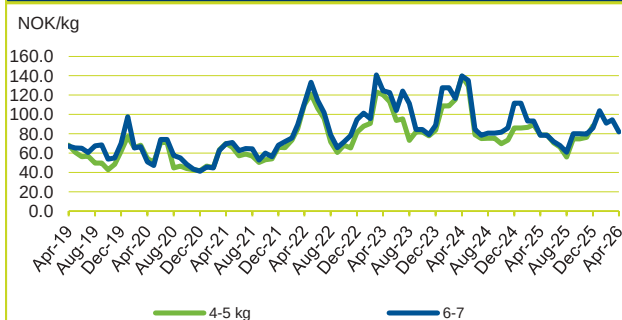

Thailand (+37 percent), Republic of Korea (+24 percent) and Taiwan Province of China (+53 percent). This expansion reflects sustained demand for fresh salmon, even in a context of rising prices.

This shift in trade flows was also evident at a broader level. Growth in Asia, driven largely by China, helped offset the continued decline in shipments to the United States, where higher tariffs and currency movements have weighed on demand, particularly for fillet products. Despite increased transport costs and logistical challenges, the overall export value of Norwegian salmon continued to rise, highlighting the sector's capacity to adapt to changing conditions.

Prices also moved in line with this firmer demand environment. NSC data disseminated by the Undercurrent News Price Portal show that fresh Atlantic salmon, FOB at the border, reached NOK 96.44 (EUR 8.29) per kg in Week 12, up 1.63 percent from the previous week. Over the course of March, prices followed a consistent upward trajectory, with four consecutive weekly increases.

Salmon - origin: Norway

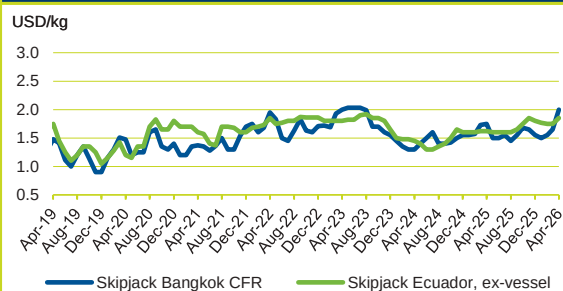

Tuna

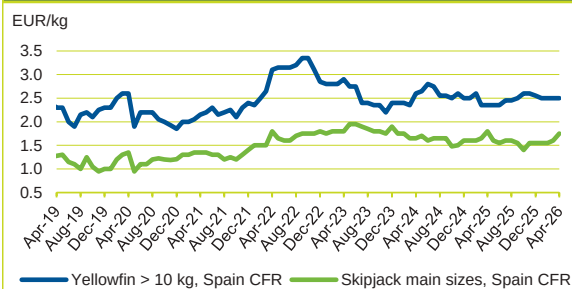

Tuna prices have been impacted by increasing fuel costs due to the Gulf conflict. In Bangkok, prices of skipjack reached USD 2 000 per tonne for the first time since July 2023, which was also a period of high fuel prices. At around USD 1 850 per tonne, skipjack prices in Manta, Ecuador, were unusually lower than Bangkok levels (normally the price in Ecuador is about USD 200 per tonne higher than in Thailand). Skipjack prices in the Seychelles and Côte d'Ivoire are in a sustained rising trend, jumping up by EUR 280 per tonne between March and April 2026. Spanish skipjack prices also moved upwards in line with the competing markets; however, the increase was relatively limited at EUR 100 per tonne.

Demand for canned tuna seems to be strong, one probable reason being that during periods of conflict and economic crisis, consumers tend to stock up with non-perishable products such as tuna in cans.

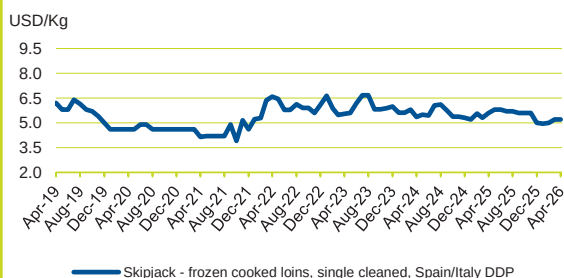

TUNA - Pacific Ocean

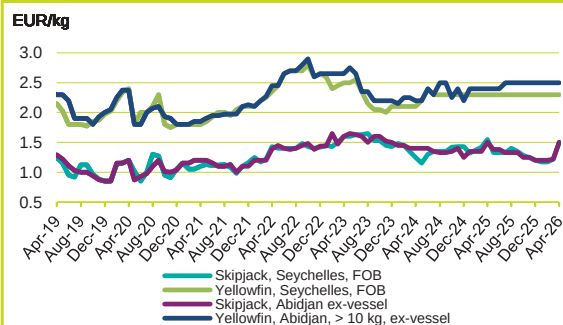

TUNA - Spanish canneries

TUNA - Loins

TUNA - Indian/Atlantic Oceans

Small pelagics

Due to the good winter fishing and quota increase for Norwegian spring-spawning herring (NVG), the total volume landed in January and February this year was 64 percent higher than in the same period last year. As a result, Norway increased its exports of herring by 20 percent in value and 39 percent in volume in the month of March, compared to the same month of last year. Egypt continues to dominate as the destination country for whole frozen herring (5 300 tonnes worth USD 7 million), followed by two other African countries, Morocco and Nigeria.

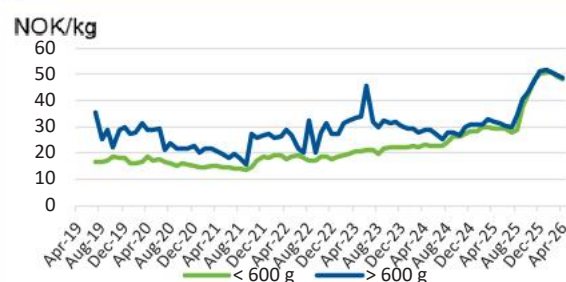

In contrast, mackerel exports have been impacted by low supplies. For the 2025/2026 season which ran from August 2025 through to January 2026, 183 000 tonnes of mackerel were landed in Norway. This represents a 44 percent decline compared with the previous season. Mackerel prices rose to record levels up until November 2025, but since December last year, prices for whole frozen mackerel (which accounts for the vast majority of exports) have shown a slight downward trend.

Norway exported 7 200 tonnes of mackerel worth NOK 370 million (USD 36 million) in March 2026. This represented a fall of 14 percent in value compared with March last year, while volume dropped by 45 percent, in line with the reduced availability.

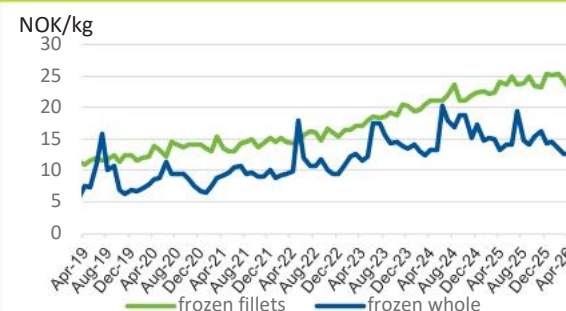

Mackerel - in Italy, origin: France

Mackerel - origin: Norway

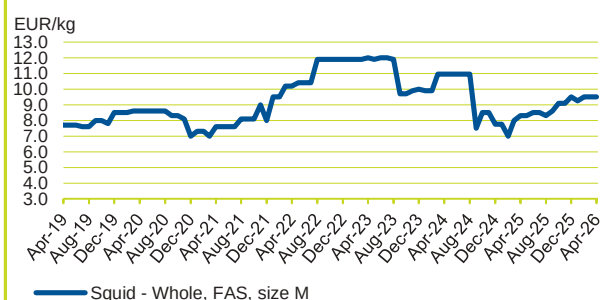

Herring - origin: Norway

Seabass and seabream

Prices remain stable at high levels for both seabass and seabream. Large seabass is particularly scarce and expensive. Spain remains one of the top importers, absorbing significant volumes from Greece and Türkiye. Demand is strong in retail trade, especially in the HORECA sector. Seabass and seabream are good substitutes for higher-priced groundfish. The general outlook is one of upward price pressure through 2026 due to tight supply and strong demand.

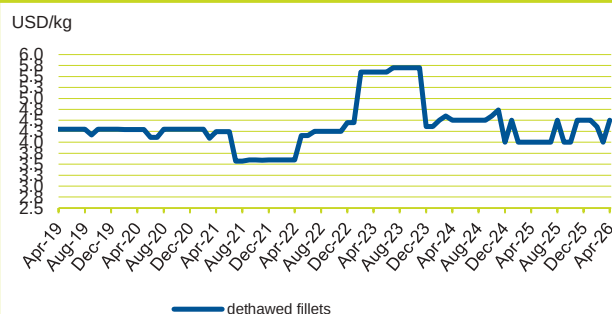

SQUID - in Italy, origin: South Africa

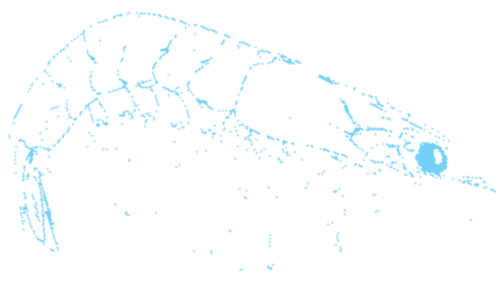

Freshwater fish

Pangasius fillets continue to dominate the European freshwater fish market, being a relatively low-priced alternative to many other fish species. In view of the present difficult economic climate, the position of pangasius in the European market will be even stronger, as the main groundfish species coming from capture fisheries are heavily impacted by tensions in the Near East. Countries where fish is normally consumed in whole form (Italy and France) have started to develop a preference for fillets, including ready meals based on pangasius fillets.

Pangasius - in Italy, origin: Viet Nam

Crustaceans

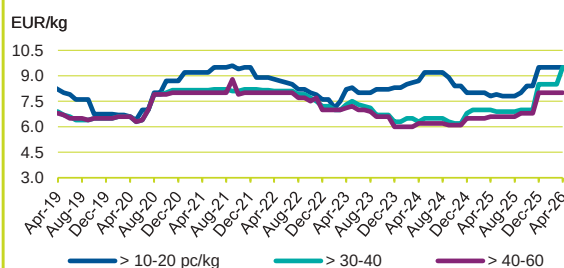

Low stock levels in Europe, and the as-yet-unconfirmed start of the fishing season in Argentina, are putting strong upward pressure on shrimp prices. Unusually, sizes 20/30 and 30/40 are priced at the same level as sizes 10/20.

Prices of shrimp in Indonesia are still relatively high compared to March because there has not been a significant rise in supply after the recent Eid holiday. In addition, the increased costs of external factors such as gasoline, packaging materials and chemicals are keeping shrimp prices buoyant. An increase in volume is expected by the end of April or early May, but this may not necessarily lower shrimp prices because the United States of America remains a fairly stable market for Indonesia at the moment. All packers are continuing to compete to meet demand in this market.

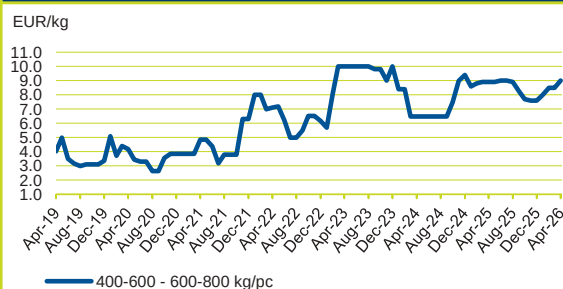

Octopus prices have gone up quite substantially. The decrease in catches from Africa has significantly affected octopus prices in Indonesia. For some production forms, prices went up by USD 2.10 per kg in just one month. The season is almost over, but catches outside Java are still relatively high.
