Latest trends

The European fisheries and aquaculture products market in the past several months has been sharply impacted by the logistical problems created by the crisis in the Near East, and by the consequent increase in fish prices. However, with the current reduction of fuel prices, the situation appears brighter. In addition, the present summer season creates huge demand for fishery and aquaculture products, especially in the popular tourist areas in the southern part of the continent.

In January to May 2026, Norway exported aquatic products worth NOK 70.3 billion (USD 7 billion). This represents a 2 percent decline, compared with the same period last year. The United States of America is the market that has seen the sharpest decline in the first five months of the year. Norwegian export value to the United States dropped by NOK 2.4 billion (USD 200 million) compared with the same period last year.

The normalization of the situation was reflected in price levels. The present European Fish Price Report records that 13 percent of prices have increased, 21 percent declined in June 2026 compared to May 2026, and 66 percent remained stable.

The European Fish Price Report, based on information supplied by industry correspondents, aims to provide guidance on broad price trends. Price information is indicative and should be used only for forecasting medium- and long-term trends. FAO is not responsible for any errors or omissions.

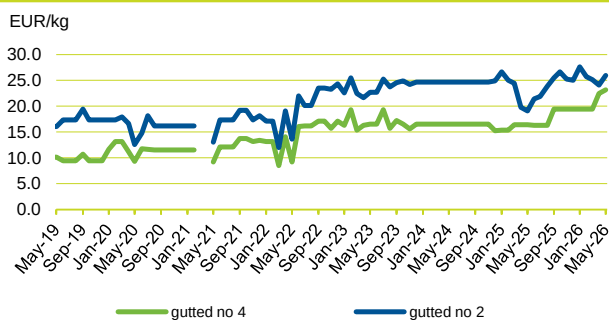

Groundfish

Cod catches continue to be depressed. The landed volume for cod in Norway, for example, was the lowest recorded in the month of May this millennium. As a consequence, Norwegian cod exports in the first five months of the year fell sharply by 29 percent. Specific to fresh wild cod, total export volume in May 2026 dropped by 52 percent to 808 tonnes, which was the lowest level for that month since 1995. Meanwhile, export value fell by 39 percent. For fresh farmed cod, the export volume fell by 1 percent to 1 204 tonnes, whilst export value rose by 8 percent in line with the higher prices experienced for cod in general. This is probably the first time in history that farmed cod has overtaken wild cod in Norwegian export value.

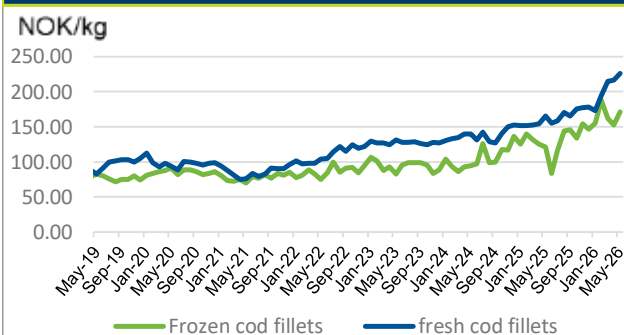

Cod prices have maintained their upward spiral. In Italy, whole cod prices increased by EUR 0.50 per kg, or 4 percent in just one month. Similar price increases have been reported from the French wholesale market.

Sole - origin: Netherlands

Cod - origin: Norway

Trout

Norwegian trout exports recorded lower value and volume in May compared with the same month last year. According to the NSC, Norway exported 6 484 tonnes of trout worth NOK 540 million (EUR 46.4 million) during the month. Export value fell by 8 percent year-on-year, while volumes declined by 11 percent.

The United States, Ukraine and Poland were the largest markets for Norwegian trout in May. Poland recorded the strongest growth, with export value increasing by NOK 27 million (EUR 2.3 million), or 62 percent, compared with the same month last year. Export volumes to Poland reached 910 tonnes, up 50 percent year-on-year. Poland remained an important destination for Norwegian trout, particularly for processing and redistribution within Europe.

According to the NSC, logistical challenges and reduced tourism activity linked to the conflict in the Near East continued to affect trade flows for both salmon and trout during May.

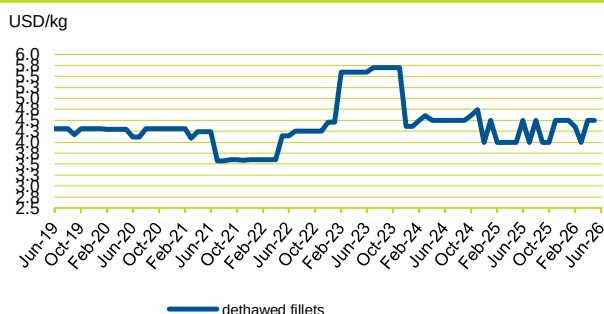

Data from the NSC, disseminated through the Undercurrent News Price Portal, indicate that prices for HOG fresh Norwegian trout, FOB at the border, stood at NOK 74.00 (EUR 6.36) per kg in Week 21, representing a 3.01 percent decline from the previous week. Following the increase recorded in Week 18, prices resumed their downward trend during May. Three consecutive weekly declines lowered the price to NOK 74.00 per kg in Week 21, bringing prices back below the levels observed earlier in the year.

Freshwater fish

Pangasius is performing very strongly in the United Kingdom of Great Britain and Northern Ireland at the moment, showing double digit growth in early 2026. UK seafood consumption has shifted towards in home dining, supporting retail demand for convenient, affordable products. Pangasius fits this trend because it is mild tasting, easy to cook, and consistently sized. In addition, the species is price competitive compared to whitefish species such as cod, haddock and pollock.

The United Kingdom is a member of the Comprehensive and Progressive Agreement for Trans-Pacific Partnership (CPTPP), which also includes Viet Nam, the main supplier of pangasius.

Pangasius - in Italy, origin: Viet Nam

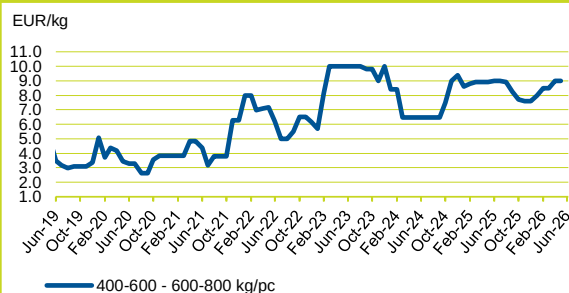

Crustaceans

Demand for shrimp continues to be bleak in Europe, despite the start of the tourist season which is normally a main consumption period.

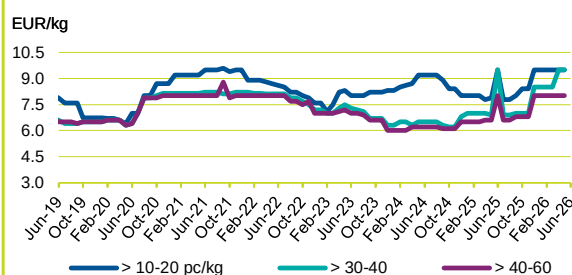

Frozen on-board shrimp from the new harvesting period in Argentina have not yet arrived in Europe. The little stock that remains from last year is being offered at high prices. In a month, with the arrival of this year's catches, prices are expected to come down significantly.

Norway extended its closed season for king crab from March to May, which led to lower exports in the first five months of the year. The US market in particular, suffered from reduced supply.

CRAB - in France, origin: Europe

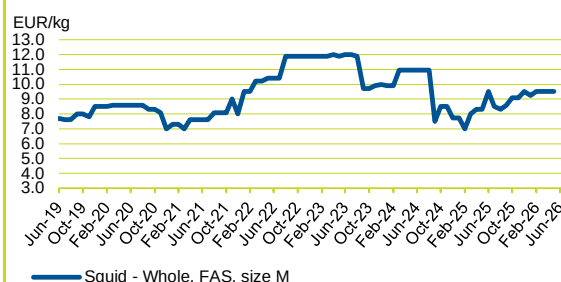

ARGENTINA RED SHRIMP - Argentina

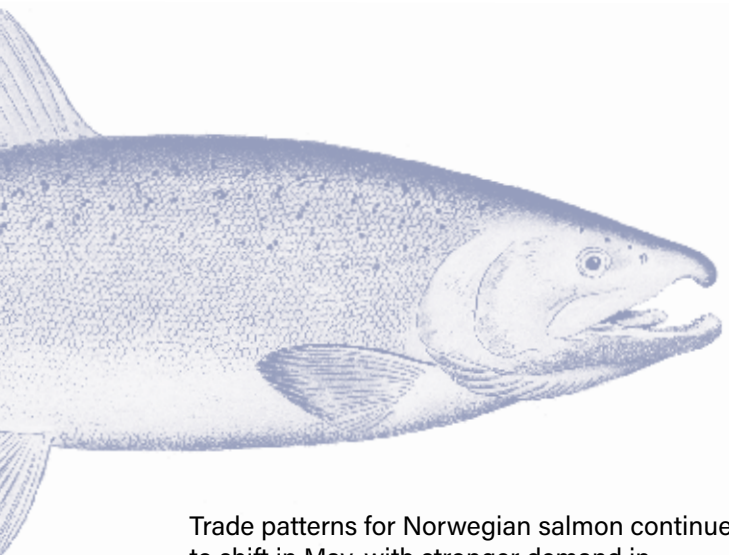

Cephalopods

Cephalopod supply is good in all major markets, and prices are coming down. Octopus, which had been in very limited volumes in recent months, experienced price declines of EUR 1.00 per tonne. Squid supply from the main sources, Argentina and Peru, is exceptionally good this year, and prices have been weak during the first half of the year. The rising El Niño, however, is likely to have a negative impact on giant squid catches in Peru, so some increase in squid prices is expected towards the end of the year.

SQUID - in Italy, origin: South Africa

Trade patterns for Norwegian salmon continued to shift in May, with stronger demand in European markets helping to offset weaker sales to the United States. According to the Norwegian Seafood Council (NSC), Norway exported 111 062 tonnes of salmon worth NOK 9.6 billion (EUR 850 million) during the month, up 1 percent in value compared with May last year, while volumes remained unchanged.

Poland, China and Spain were the largest markets for the species in May. Poland recorded the strongest growth in value, with exports rising by NOK 299 million (EUR 25.7 million), or 27 percent higher compared with the same month last year, while export volumes reached 18 337 tonnes, up 29 percent year-on-year.

According to NSC analysts, the strong performance in Poland reflects growing salmon consumption in Europe. Germany, one of the region's largest consumer markets, has recorded increased demand over the past year, supporting imports of processed salmon products supplied through European distribution and processing hubs. China

Salmon

also remained an important growth market, reflecting sustained demand for aquatic products intended for raw consumption.

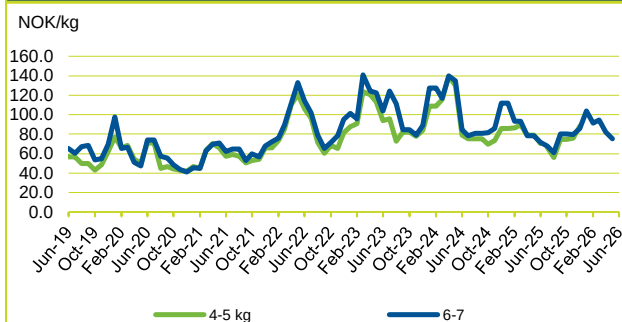

In contrast, exports to the United States continued its decline. Export value fell by NOK 630 million (EUR 54.1 million), or 40 percent, compared with May last year. According to the institution, tariffs, uncertainty regarding market access, and the weaker US dollar, continued to affect trade flows, particularly for fresh and frozen salmon fillets.

Trade with the Near East also remained affected by logistical challenges and higher transport costs linked to the ongoing conflict in the region. Export volumes to major markets in the region were down by more than 20 percent in May, reflecting disruptions to normal trade routes.

Data from the Undercurrent News Price Portal, based on NSC figures, show that prices for fresh Atlantic salmon, FOB at the border, reached NOK 74.50 (EUR 6.40) per kg in Week 21, down 6.24 percent from the previous week.

Salmon - origin: Norway

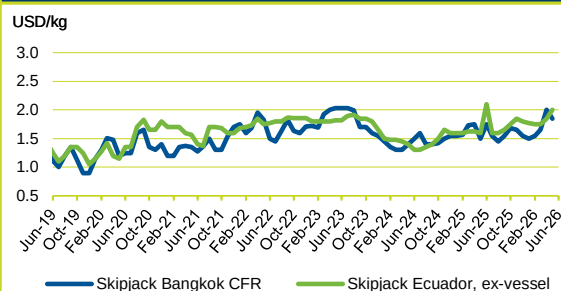

Tuna

As the news from the Near East began to improve, frozen whole round skipjack prices in Bangkok eased in May. Canners have been pushing to reduce skipjack prices, and the new deals were about USD 100 per tonne less than a month ago. On the other hand, in Ecuador, skipjack prices stayed at their high levels reached in April; the differential with the Abidjan price is now USD 350 per tonne, which will soon redirect supply towards Manta.

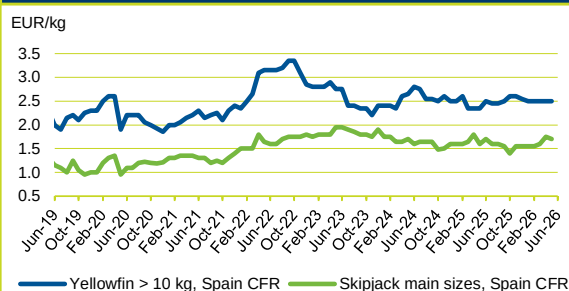

Yellowfin prices were generally stable in all major producing areas, showing good supply and steady demand for this species. Later in the year, supply from the Indian Ocean will reduce due to the completion of the catch quota, at which time prices are likely to go up.

The easing of tensions related to the Near East has improved tanker traffic and lowered oil prices, offering relief to the global tuna industry through reduced fuel and transport costs. Of all the wild fish sectors, the tuna industry is the most sensitive to fuel prices, as this component makes up a huge share of the total costs. The de-escalation is expected to support stable supply chains and could contribute to softer tuna prices in the coming weeks.

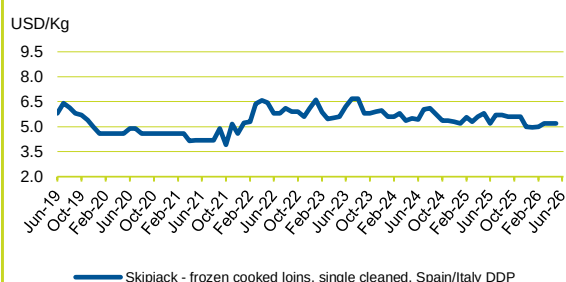

TUNA - Pacific Ocean

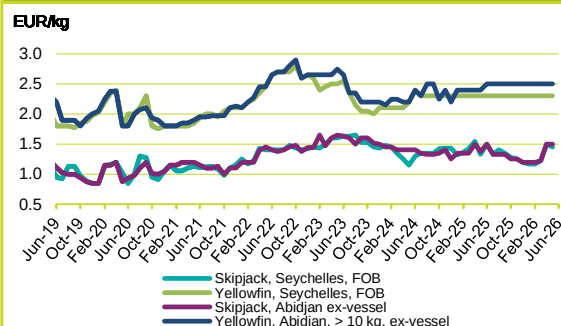

TUNA - Spanish canneries

TUNA - Loins

TUNA - Indian/Atlantic Oceans

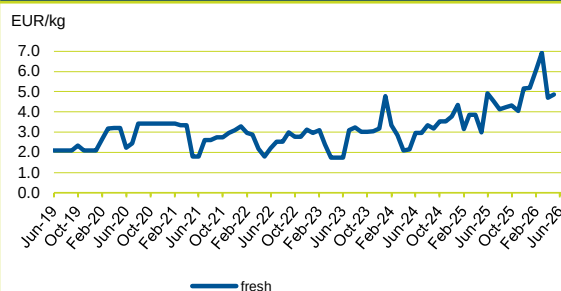

Small pelagics

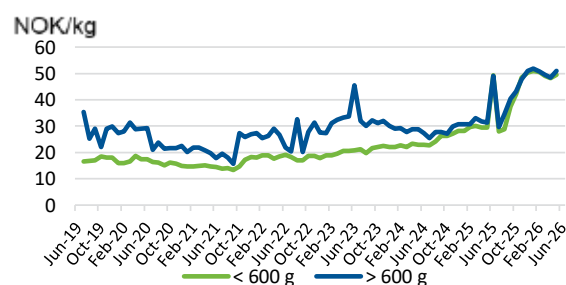

After four very strong months, herring exports from Norway fell in May 2026 compared with the same period last year. The North Sea herring season, which had barely got underway towards the end of the month, had little impact on exports. Although volumes remain low, a shortage of mackerel in the market, coupled with their high prices, mean that many players are now importing herring. Japan, for example, has increased its imports of herring.

Like herring, mackerel exports from Norway also dropped in May, and one has to go back to 2013 to find lower volumes. The price of whole frozen mackerel under 600 grams, which is by far the largest export product, has stabilized in Norwegian krone. However, the strengthening of the Norwegian krone means that mackerel is becoming increasingly expensive in many markets.

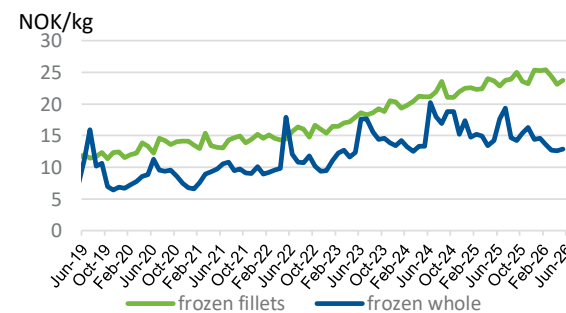

Mackerel - in Italy, origin: France

Mackerel - origin: Norway

Herring - origin: Norway

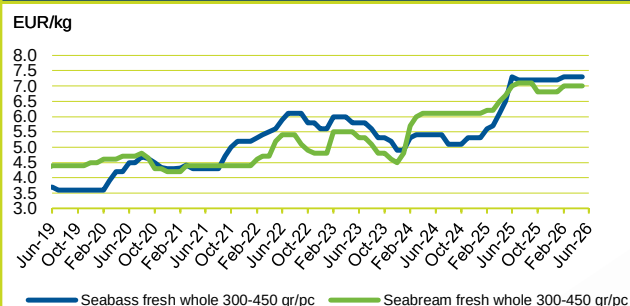

Seabass and seabream

Both seabass and seabream are well-liked products in the catering sector and are in strong demand during the present tourist season. Large-sized seabass and seabream which are mainly used in restaurants, are experiencing price hikes. In contrast, the prices for smaller-sized fish are declining due to strong influx of products. Producers in Greece and Türkiye have started harvesting early in the season, due to the fear of heat waves which in the past have wiped out production in various areas.

Presently, France's seabass market is defined by high prices, tight supply, and strong export performance, with the country acting as both a major consumer and a significant exporter. In Italy, the seabass market is characterized by moderate prices, declining export volumes, and tight supplies that maintain an upward pressure on prices.

SEABASS/SEABREAM Italy origin Greece

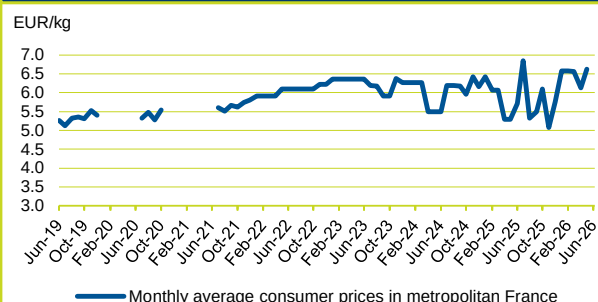

Bivalves

France is highly import reliant for molluscs, including mussels. The present mussel market in the country is characterized by strong domestic demand, stable but cost pressured production, and a continued reliance on imports, while prices remain elevated due to environmental and regulatory constraints. Spain is the largest supplier, accounting for 30 percent of import value, followed by the United Kingdom with 14 percent.

Although the strongest and most catastrophic effects so far have been on clams, the invasive blue crab (*Callinectes sapidus*) is already impacting Italy's mussel sector. Scientific evidence shows that the blue crab feeds voraciously on mussels, and its rapid expansion in the Adriatic is creating direct predation pressure, gear damage, and

ecosystem disruption that indirectly affect mussel farming. The sector is already under pressure from environmental variability such as heatwaves and low oxygen events. Small-scale, low margin producers with limited adaptive capacity have been particularly affected.

MUSSEL BOUCHOT - in France
